**TeleContinuity Teams Up With EnvoyWorldWide to Offer Companies the Ideal Solution for
Managing Delivery of Time-Sensitive Communications**

*Alliance Applies Years of Intellectual and Practical Experience Towards
Continuity of Communications Solutions*

BEDFORD, Mass. – October 10, 2005 – EnvoyWorldWide®, the experienced provider of high availability notification services, and TeleContinuity®, Inc., provider of critical backup telecommunication services for business and government, today announced a strategic partnership that combines EnvoyWorldWide’s Notification Services for Business Continuity with TeleContinuity’s Survivable Communications Network to ensure maximum availability of communications systems during times of crisis.

TeleContinuity’s Survivable Communication Network is a robust call-routing system that redirects calls to a subscriber in an emergency using the Internet and the public telephone network. This solution, which is vital to all continuity of operations plans for business and government agencies, assures unbroken continuity of communications during disasters, evacuations or telecommunications outages.

“While telephone backup services are critical to recovery and continuity in an emergency, our customers were looking to us to provide a more comprehensive communication solution,” said Roy Pinchot, President and CEO of TeleContinuity, Inc. “With Envoy, we can now offer our customers a complete package that includes the ability to send critical messages, while ensuring the messages are routed to the correct recipient.”

Designed to manage spikes in traffic and prioritize time-sensitive messages, EnvoyWorldWide delivers personalized, interactive communications to support the emergency communications needs of its customers. These services, in concert with the telephone backup services, enable TeleContinuity to now offer its customers high-speed, high-volume messaging services to provide a more comprehensive emergency communications plan.

“With a shared vision of reliability, scalability and high-capacity, the collaboration between Envoy and TeleContinuity provides a powerful and competitive one-two punch,” said Ben Levitan, President and CEO of EnvoyWorldWide. “Offering the robust notification platform of Envoy with the backup capabilities of TeleContinuity, this joint solution gives customers a powerful set of tools for ensuring continuity of communications.”

About TeleContinuity, Inc.

Founded in the wake of September 11, 2001 and the subsequent anthrax attacks on Congress, TeleContinuity is focused on providing telecommunications-assurance services to government and businesses customers worldwide. Positioned as "telecommunications gap insurance," TeleContinuity delivers a seamless, low cost, network-level solution that will restore incoming telephone service to users within minutes of a PBX or telephone company failure, fiber cut, fire, flood, building evacuation, or catastrophic event. TeleContinuity, Inc. is a 2003 winner of The National Institute of Standards and Technology's Advanced Technology Program (NIST-ATP) Grant Competition.
